

Biological Waterfall Filters & Accessories

Little Giant biological waterfall filters were created to help maintain a balanced ecosystem. These highly efficient models use the latest filtration technology to decrease maintenance time and provide quick, tool-less access to the filters.

In addition to being extremely effective biological filters, these units produce natural-flowing waterfalls. All plumbing is hidden, and plant baskets can be placed on top to create both a natural disguise and additional filtration. Easily installed, they can be added to any new or existing water feature.

Filters

Little Giant has created tools to help maximize the beauty and efficiency of any-size water feature. The patent-pending BioVort® technology is designed to evenly disperse debris and settle solid bio-loads for less maintenance and superior filtration.
